General Document

Summary

Synthetic test data created for an AI CA Assistant. It contains fictional business details, sample GST sales invoices, purchase/input tax credit data, an income tax summary, bank transaction listings, and suggested test questions.

Important Details

- Business: Shree Tech Solutions, Sole Proprietorship, GSTIN 27ABCDE1234F1Z5 (TEST), PAN ABCDE1234F (TEST), FY 2025-26, State Maharashtra.
- Total taxable sales value (from sample invoices): $20,000 + 15,000 + 10,000 + 25,000 = 70,000$.
- Total CGST on sales: $1,800 + 1,350 + 600 + 2,250 = 6,000$; Total SGST on sales: same 6,000.
- Total input GST (purchases): $\text{CGST } 720 + 450 + 180 = 1,350$; $\text{SGST } 720 + 450 + 180 = 1,350$.
- Sample net business profit reported: 50,000.
- Bank transactions show income matching invoice totals and expense payments for rent, internet & software, etc.

Risks

- All GSTIN, PAN, and financial figures are test values; using them for real filing would be non-compliant.
- The document mixes multiple reporting formats (sales, purchases, ITR, bank) which could lead to misinterpretation if treated as an official filing.
- No supporting documents (e.g., actual invoices, receipts) are provided; reliance on this data alone could cause audit issues.
- Tax calculations are illustrative only; actual liability may differ due to rounding, exemptions, or additional taxes.

Recommendations

- Use this data strictly for software testing or training; replace with real, verified figures for any statutory filing.
- Reconcile sales and purchase GST amounts to compute net GST payable: $(\text{Total CGST+SGST on sales}) - (\text{Total CGST+SGST on purchases})$.
- Prepare a proper GST return (GSTR-1/GSTR-3B) using actual invoices and purchase bills, ensuring correct HSN codes and tax rates.

- Prepare the Income Tax Return using the real profit & loss statement, confirming deductible expenses and applicable exemptions.
- Maintain original source documents (tax invoices, bank statements, expense receipts) for audit trail.
- If transitioning from test to production, validate that all mandatory fields (GSTIN, PAN, invoice numbers, dates) comply with statutory formats.
